

AMENDMENTS TO THE SPECIFICATION:

Please amend the specification as follows:

Please replace the paragraph in the specification that was published as paragraph [0034] in Publication No. US 2007/0146126 A1 with the following paragraph:

[0034] At RID the lighting control unit continuously or intermittently modulates the light in the local area and determines whether a correct response from any occupancy detector(s) D located in the respective local area [[are]] is received. A correct response will be a detector-locator signal that includes a code for the respective local area. For example, if the lighting control unit is controlling the illumination of local area B, a correct response for a detector in this area will include a code identifying local area B.
